Amendments to the Specification:

Amend the paragraph beginning at page 5/line 24 as follows:

In Formula (1), Ar^1 and Ar^2 independently represent the atoms necessary to <u>complete form</u> an aromatic ring group, such as a phenyl ring group or a pyridine ring group. Ar^3 represents the atoms necessary to <u>complete form</u> a six-membered heteroaromatic ring group, such as a pyridine ring group. In addition, Ar^3 and Ar^1 as well as Ar^3 and Ar^2 may join together to form rings. X represents a halide, such as Cl or F. In one desirable embodiment, X represents F.

Amend the paragraph beginning at page 9/line 12 as follows:

In Formula 5a, Ar^4 and Ar^5 independently represent the atoms necessary to <u>complete form</u> a five or six-membered aromatic ring group, such as a pyridine group. X^a and X^b represent independently selected substituents, such as fluoro substituents.
